

Understanding mailbox enabled and mail enabled recipients in Exchange 2003

Written by Marc Grote - <mailto:grotem@it-training-grote.de>

Abstract

In this article I will show you the differences between mailbox enabled and mail enabled recipients in Exchange 2003 and how to use them.

Let's begin

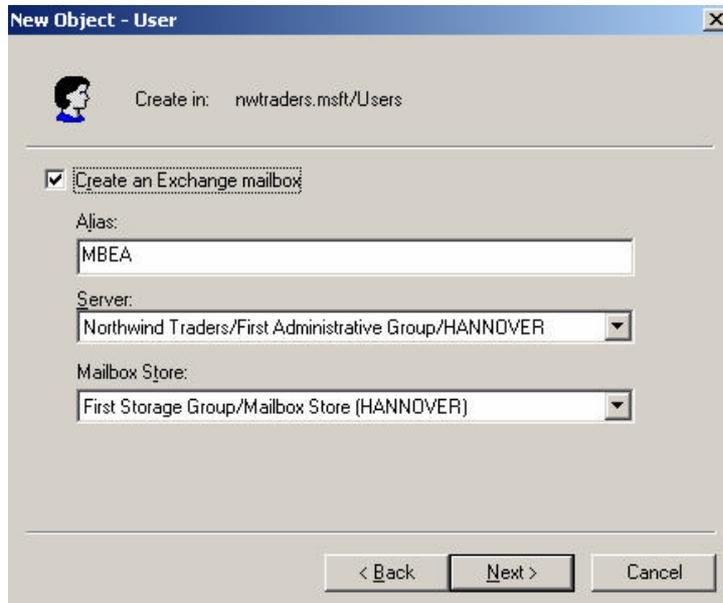

What is the difference between an Mailbox enabled recipient and an Mail enabled recipient?

A Mailbox enabled recipient can log on to network resources and can access domain resources. Users can be added to groups and appear in the global address list. Mailbox-enabled recipients can send and receive messages and store messages on their Exchange server mailboxes. You can use mailbox enabled recipients for all aspects and functions in Exchange Server 2003.

A Mail enabled recipient can receive messages only at an external e-mail address. The mail enabled recipient cannot send or store messages on Exchange message stores. A mail enabled user has account in Active Directory but no Exchange mailbox. A mail-enabled user is listed in the global address list. This enables other users to easily locate and send e-mail to a mail-enabled user even if the account does not have a mailbox in the Exchange organization. For example, you may create a mail enabled user for onsite contract employees who require access to the network but who want to continue receiving their e-mail through their Internet service provider.

Mailbox enabled recipients

Start Active Directory Users and Computers to create a new Mailbox enabled recipient.

New Object - User

Create in: nwtraders.msft/Users

Create an Exchange mailbox

Alias: MBEA

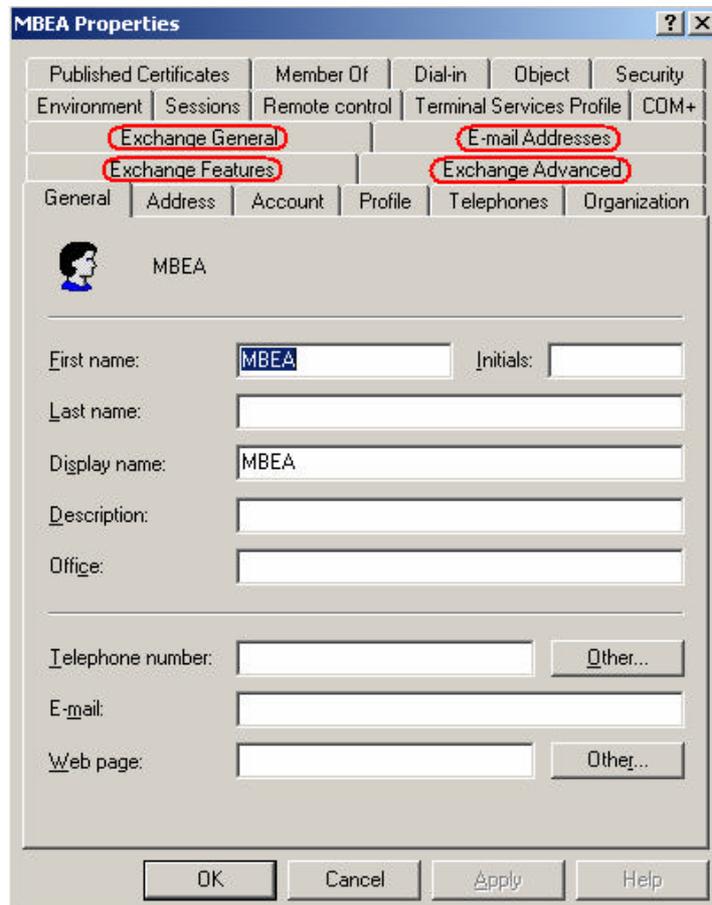

Server: Northwind Traders/First Administrative Group/HANNOVER

Mailbox Store: First Storage Group/Mailbox Store (HANNOVER)

< Back Next > Cancel

Figure 1: Create a Mailbox enabled recipient

After successful account creation you can see several additional maps with possible Exchange configuration settings as you can see in **Figure 2**.

MBEA Properties

Published Certificates Member Of Dial-in Object Security
Environment Sessions Remote control Terminal Services Profile COM+

Exchange General E-mail Addresses
Exchange Features Exchange Advanced

General Address Account Profile Telephones Organization

MBEA

First name: MBEA Initials:

Last name:

Display name: MBEA

Description:

Office:

Telephone number: Other...

E-mail:

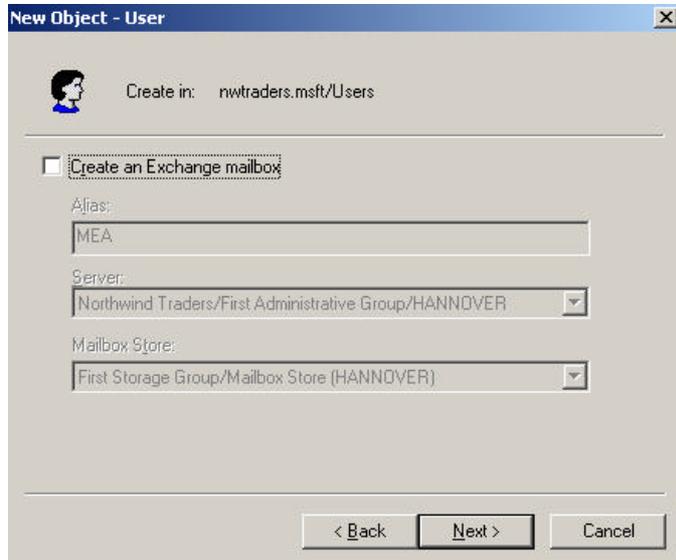

Web page: Other...

OK Cancel Apply Help

Figure 2: Mailbox enabled recipient properties

Mail enabled recipients

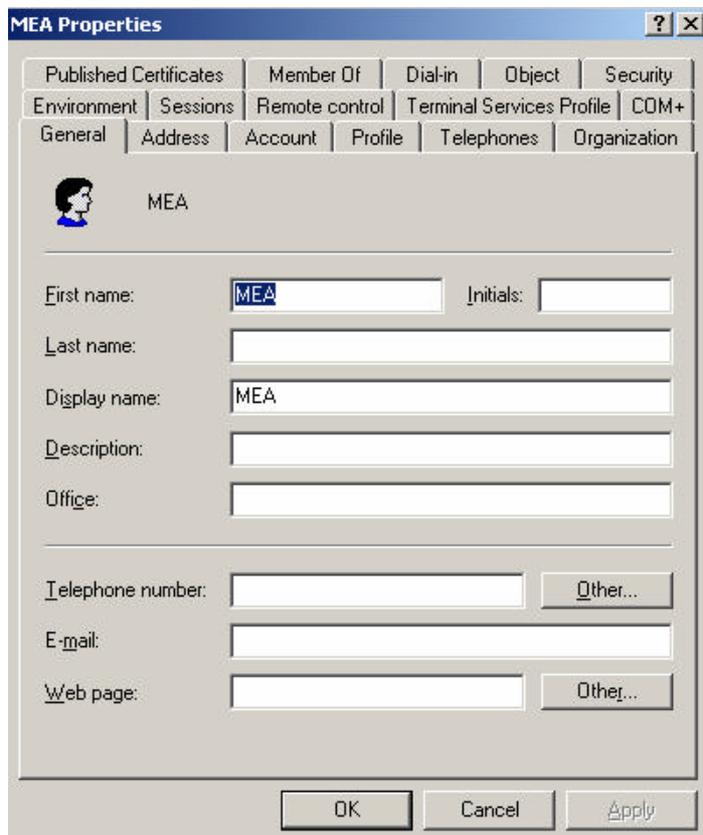

Now it is time to create a mail enabled recipient. The only initial difference between the creation of an mailbox enabled recipient and an mail enabled recipient is that you clear the checkbox **Create an Exchange mailbox** until account creation.

The screenshot shows the 'New Object - User' dialog box. At the top, it says 'Create in: nwtraders.msft/Users'. Below this is a checkbox labeled 'Create an Exchange mailbox' which is currently unchecked. Underneath the checkbox are three input fields: 'Alias' with the text 'MEA', 'Server' with a dropdown menu showing 'Northwind Traders/First Administrative Group/HANNOVER', and 'Mailbox Store' with a dropdown menu showing 'First Storage Group/Mailbox Store (HANNOVER)'. At the bottom of the dialog are three buttons: '< Back', 'Next >', and 'Cancel'.

Figure 3: Create a mail enabled recipient

After you had successful finished the account creation click into the account properties and notice that there are no additional Exchange maps. Additional Exchange maps don't appear until you assign an E-Mail address for this account.

The screenshot shows the 'MEA Properties' dialog box with the 'General' tab selected. The 'First name' field contains 'MEA' and the 'Initials' field is empty. The 'Last name' field is empty. The 'Display name' field contains 'MEA'. The 'Description' and 'Office' fields are empty. The 'Telephone number' field is empty with an 'Other...' button next to it. The 'E-mail' field is empty. The 'Web page' field is empty with an 'Other...' button next to it. At the bottom are buttons for 'OK', 'Cancel', and 'Apply'.

Figure 4: Mail enabled recipient properties before E-mail address establishment

Now it is time to establish an E-Mail address for the newly created account. Right click the account – click **Exchange Tasks** and select **Establish E-mail Address**.

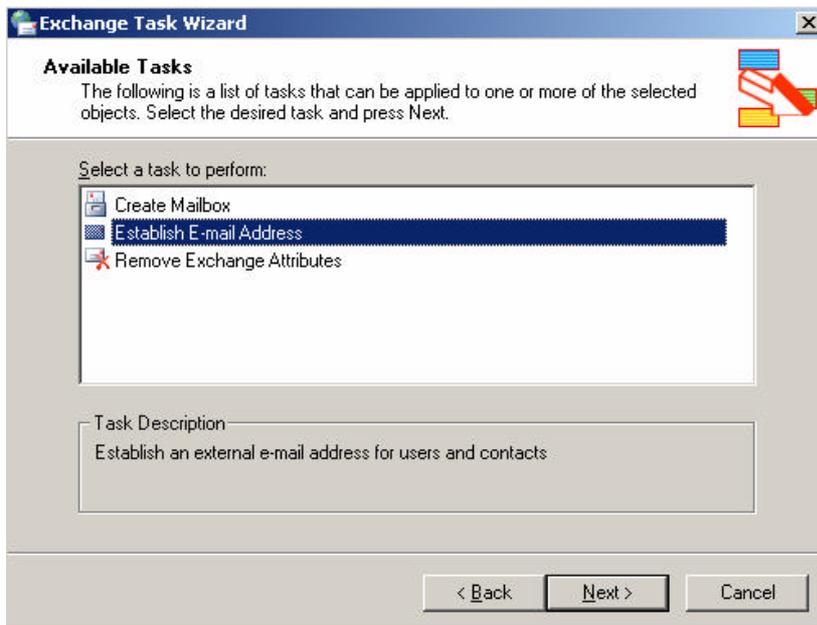

Figure 5: Establish a E-Mail Address

You must assign an External E-mail Address for this account. In our example we create the external SMTP E-Mail Address `grotem@it-training-grote.de` shown in **Figure 6**.

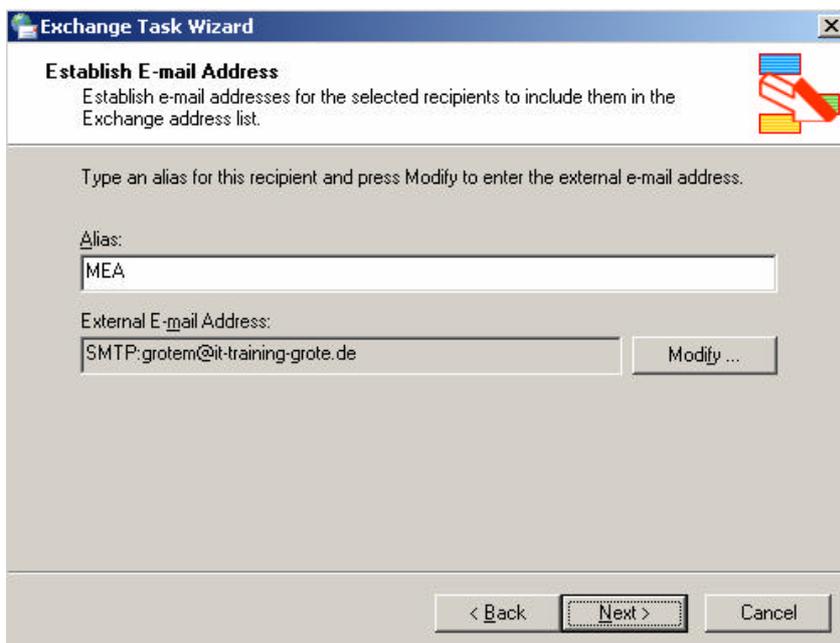

Figure 6: Assign a SMTP E-Mail address

After mail enabling this account you can see additional Exchange maps for this account as shown in **Figure 7**. As you can see there are no options to configure mailbox properties like Mailbox Store limits and Exchange features like OWA and OMA.

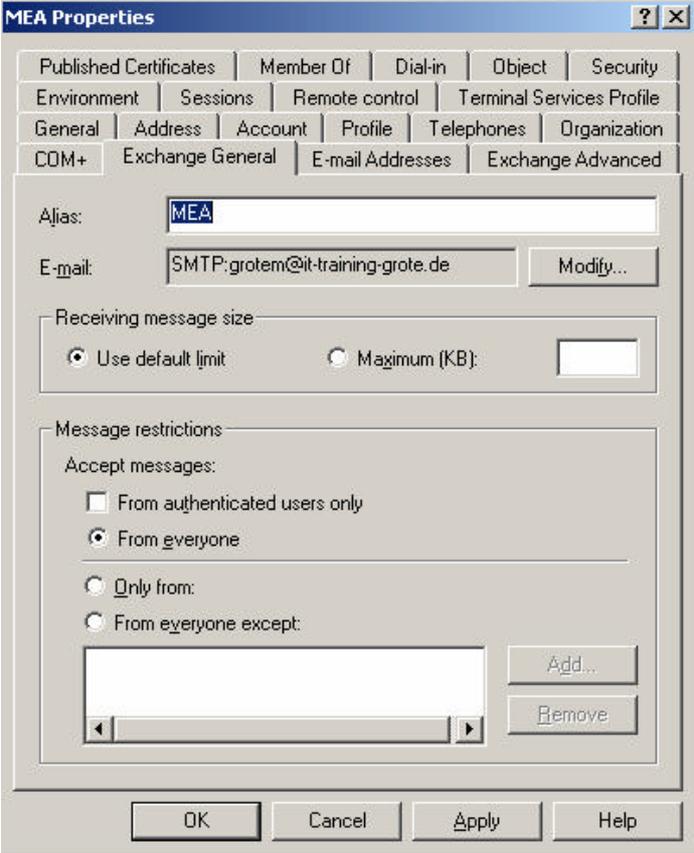

Figure 7: Mail enabled recipient properties after E-Mail address assignment - Part I

There are still more differences between mailbox enabled accounts and mail enabled accounts. In **Figure 8** under Exchange Advanced you cannot see the button to assign mailbox rights because this account has no mailbox.

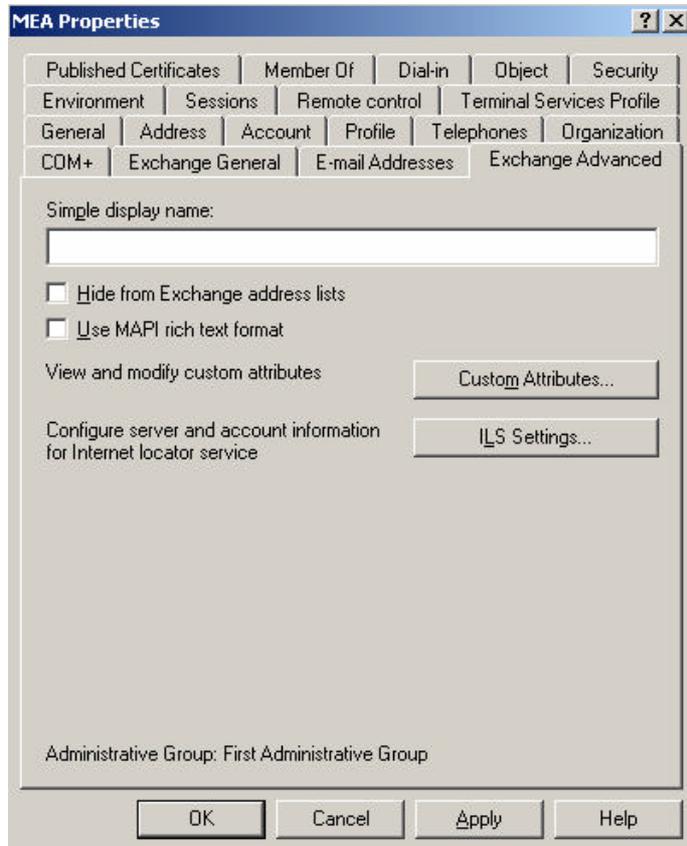

Figure 8: Mail enabled recipient properties after E-Mail address assignment – Part II

Differences between mailbox enabled recipients and mail enabled recipients in LDP.EXE

For our last example of differences between Mailbox enabled recipients and mail enabled recipients we will use the LDP tool from the Windows Server 2003 support tools. You can use LDP.EXE after you install the Windows Server 2003 support tools from the Windows Server 2003 installation media. The support tools can be found in the support directory on the CD. After installing the Support Tools, start LDP.EXE, bind to the directory and select the Mailbox enabled recipient. In the right hand you can see the attributes and values for mailbox enabled accounts.

Mailbox enabled recipient (MBEA)

Figure 9: Mailbox enabled recipient view with LDP.EXE

As an example notice the following attributes for the mailbox enabled account:

- msExchangeHomeServerName
- msExchangeMailboxGuid

This attributes (and some more) are unique to mailbox enabled accounts.

Mail enabled recipient (MEA)

After viewing the attributes for the Mailbox enabled account select the mail enabled account in LDP and displays the attributes and values for this account as shown in **Figure 10**.

Figure 10: Mail enabled recipient view with LDP.EXE

Conclusion

I hope that you understand the difference between Mailbox enabled users and Mail enabled users and how to use them in Exchange Server 2003. The important difference between an Mailbox enabled account and an mail enabled account is only the assigned mailbox for the mailbox enabled account.
